

smartwork progressive innovations in print

PPS are constantly striving to stay at the forefront of the print industry. Our latest innovation is what we call “**smartwork**”. **Smartwork** stands for **Self Manipulated Artwork**. With **smartwork** our clients have the ability to create their own artwork via the internet, to THEIR specific corporate guidelines. Our bespoke software generates a template allowing a letterhead or business cards variable data to be changed easily, online. If you have multi sites each with their own telephone and fax numbers, then each individual office can log on to our secure internet site, open up a template of their own corporate stationery and change all the details to suit. Once the customer has finalised their amendments they can then generate a PDF proof, gain approval and order online.

It's artwork made simple, it's easy to use and alleviates the chance of error.

*That's why we call it **smartwork**. For smart people.*
